CS 101: Introduction to Computer Science

Ken Culp

Prerequisite: None

Required materials:

- Online Resources: Assignments will be made almost daily from the first two web sites listed below. You will want to work through all these tutorials with your text editor open (see below) and try the techniques described. You cannot learn the material nor pass the exams if all you do is read the tutorials! Take notes as you work through the text flag important information, noting in particular that content about which you have a question. For best results, keep your class notes and homework in a loose-leaf notebook which you bring to class each day.
  - [http://mathsql.nmu.edu/htmlbook/Viewer.aspx](http://mathsql.nmu.edu/htmlbook/Viewer.aspx): Use this link to try the examples in the text. From this site, you can also download the HTML and CSS source for the examples.
  - [http://www.w3schools.com](http://www.w3schools.com): This class covers two major tutorials from this site: HTML Tutorial, and CSS Tutorial. From the HTML Tutorial, study all Basic topics except Frames and Quick Lists from this site. From the CSS tutorial study the Basic, Styling, and Box Model sections.
  - [http://www.htmldog.com](http://www.htmldog.com): This is an optional, second site that duplicates most of the w3Schools information but with a different presentation style and a slightly difference sequence. Study HTML Beginner/Intermediate as well as CSS Beginner/Intermediate.
  - [http://www.w3schools.com/tags/default.asp](http://www.w3schools.com/tags/default.asp): Complete HTML reference (use as needed).
  - An NMU Laptop with text editor software installed. For details on editors, see the Web Site Development text.

This course satisfies the Formal Communication Studies requirement. This course is designed to introduce students to the ways in which information and ideas are expressed using a communication system other than English. Such courses should foster the student’s ability to conceptualize and communicate in an orderly, rational manner. Characteristics of a communication system include: 1) possession of a grammar; 2) operation from an established set of rules; 3) reasoning properties such as deduction, inference drawing and problem solving. This includes courses in languages and those in which the central focus of the course is on statistics, computers or formal logic.

Attendance: Attendance is required and will be checked daily. If there is a class exercise that day, you will receive a zero unless you can document an excused absence. Also, you may miss material that would later appear on an exam. Thus, you are responsible for keeping up with assignments. Use e-mail to advise me when you know in advance that you will miss class.

Outcomes and Assessment: At the end of this class students should be comfortable developing a multi-page web site that is styled by both internal and external style sheets. In addition, students should have a basic understanding of how to add validations and interactivity to web sites using JavaScript. Mastery of the content and achieving the desired outcomes will primarily be measured by the two major projects (HTML and JavaScript). However, to insure the projects are developed by each individual student, two major exams will be given that cover the content included in the projects. Lecture and Lab Sessions: Class will consist of both lecture and lab time. During the labs, you will be given specific assignments that illustrate the content being covered. Some of these assignments will be given as homework which will be uploaded to the internet (see Submitting Assignments below). Since you can get help from the instructor (and/or your peers) during the lab time, completing the assignments is relatively easy provided you come to class!

Assignments: Homework will be assigned frequently with specific due dates. If the assignment is not submitted by the due date, there will be a 20% late penalty up until the final cutoff date after which a zero will be recorded. Given that homework constitutes almost 20% a of your total course points, missing several assignments will significantly lower your final grade. The best policy is to complete the assignments the day they are made and upload them immediately. Note that the assignments are relatively easy with most taking less than 30 minutes (except for the projects which count more points as noted in the grading system below). In many cases, you will have time during the frequent lab sessions to do the homework and upload it. If you start missing assignments, I will make you to come in for office hours and work on your assignments!

Submitting Assignments: Assignments will be uploaded to the Web. You will receive an email describing the assignment and including a link for uploading your work. You click the link and paste your assignment into the space provided. Once the assignments are graded, you will be able to see your grade and the grading notes online.

Quizzes: Quizzes may be given at the start of every class period. If you are late or have an unexcused absence, you receive a zero! Each quiz is worth 10 points and will usually consist of writing a short HTML program, a cascading style sheet, or a segment of JavaScript. These quizzes will be a simple application of material assigned from the online sites or from class notes and will frequently exactly duplicate your homework assignment. Quizzes cannot be made up. However, if you have an excused absence on the day of a quiz, the quiz will not count against you nor lower your grade.

Exams: There will be one 50-point exam on computer history and two 100-point exams after each major section of material. Tests cover online material, homework, and concepts discussed in class. No test scores will be dropped. You must take tests and quizzes at their scheduled times. No make-up is possible for any exam unless you notify me before test time or have a written, valid excuse. A documented excuse is necessary in order to take a make-up test. Grades on quizzes and tests are not “curved.” The exams cover material in the sequence shown below.

There is a practice exam available for each exam that, if studied well, should insure that you get at least a high B. An email will be sent out with a link to each practice exam but the links are given below in case you want to study ahead.
Exam 1:  Computer and internet history (chapter 1 of Web Site Development)

Exam 2:  HTML and Cascading Style Sheets (run the tutorials listed below)
   Chapters 2 through 4. If any of this is not ready, it will be covered in class.
   http://www.w3schools.com/html/default.asp topics:
   Introduction, Get Started, Basic, Elements, Attributes, Headings, Paragraphs, Formatting (Text Formatting only), Styles, Links including Mail, Images (skip Image Map items), Tables, Lists, (skip remaining items under Basic HTML).
   http://www.w3schools.com/css/default.asp topics:
   Introduction, Syntax, How To, Text (Color, Background Color, Align Text, Indent), Font (Font, Size, Style, Bolds), List, Table. Check out the following for examples for HTML and CSS:
   http://www.w3schools.com/html/html_examples.asp
   http://www.w3schools.com/css/css_examples.asp

Exam 3:  JavaScript. This exam will serve as the final and will be given on the scheduled final exam date.
   Chapter 5 through 8. Some of this material may not be covered depending upon our schedule.
   http://www.w3schools.com/js/default.asp topics:
   Introduction, How To, Where To, Statements, Variables, Operators (except %, +, -, *, /, ++, and --), Popup boxes, If...Else, For Loop, While Loop, Events
   http://www.w3schools.com/css/default.asp topic: Forms

Class participation: As noted above, if you want to succeed in this class, you need to do the work, attend class, and participate in class discussions. I will know those that are really trying and those that are not and it can affect your grade. If you are having trouble, I want you to ask for help and ask questions in class. The only stupid question is the one you failed to ask and then missed a problem on a quiz or test! If you are uncomfortable asking questions in class, send me an email.

How to get a good grade: Be willing to make the effort to do all assignments! You are paying a substantial sum of money to take this class so you might as well get the most out of it. Any job worth doing is worth doing well. If you do your best and ask for help when you are in trouble, I will guarantee that you will pass the class. Specifically, if you are trying and doing the work, I will commit to providing you whatever extra help is needed; but you have to ask.

Also, really trying hard counts in your favor as noted below in the grading system (attitude). Truly, the more work you put in, the better grade you will make and the better prepared you will be for the exams.

How to study: Once you have done the required assignments, study them carefully. You cannot prepare for an exam by simply looking at your homework. The only way to guarantee that you can reproduce the required HTML, CSS, and JavaScript is to start with a blank screen and no notes and do the assignment again. Repeat this process until you are creating the required code effortlessly and without errors. Do NOT arrive at a major test knowing that there is something you cannot do that has been assigned. Ask for help!

Once you understand the basic methodology for solving the assignments, place yourself into a simulated exam environment to verify and cement your learning. Copy a sampling of projects of each type that will be on an exam to a blank piece of paper, close all your notes and books and previous work (nothing but a calculator) and work the projects. Alternately, write complex web pages and scripts; get outside the box and experiment. The more you write, the easier the exams and the final.

Approximate Grading System (there may be more or less quizzes or assignments):
Approximately 10 short homework assignments at 10 points each 100 points
Approximately 5 quizzes at 10 points each 50 points
History of computers and the internet 50 points
HTML Multi-Page web site project (resume or other topic) 50 points (See page 89 of text)
HTML/CSS Exam 100 points
JavaScript Order Form 50 points (See page 183 of text)
JavaScript Exam (counts as final) 100 points
Instructor Evaluation (mostly attendance but some attitude/effort) 50 points
Approximate Total: 550 points

To pass the course you must complete both projects and take all tests!

Extra Help:
Office Hours (NSF 1005) are Monday, Wednesday, Thursday and Friday from 9am to 10:30am. However, the only way to guarantee that I will be there is to book your appointments online at http://mathsql.nmu.edu/Advising/Student.aspx. Go to this site and book your appointments. You will receive an email with additional instructions on use of the site.

Students with Disabilities: If you have a need for disability-related accommodations or services, please inform the Coordinator of Disability Services in the Dean of Students Office at 2001 C. B. Hedgcock Building (227-1700). Reasonable and effective accommodations and services will be provided to students if requests are made in a timely manner, with appropriate documentation, in accordance with federal, state, and University guidelines.

Final Commitment: You and I are a team in this class with the same objective – for you to learn the material and to receive a passing grade in the class. However we must work together as a team. Your job on our team effort is to give all assignments your very best effort AND ask for help when needed. My job is to insure that you learn the material. Do you part as noted above and I commit that you will pass.

However, don’t take my commitment as meaning you can pass with minimum effort; it won’t happen. You are responsible for you and no one else. If you do not succeed, you can blame no one but yourself. Therefore, make a commitment to yourself at this very moment that this class is worth passing and that you will give it your best effort! Together, as a team, you can expect an A!
