Everyone is invited to a special Mathematics and Computer Science Colloquium that will celebrate the third Intel-sponsored app programming competition held at NMU last semester (Winter 2013). We will award $6,000 in prize money to the top three teams of NMU students who submitted apps using Intel’s CCF software to run on multiple mobile platforms, from smartphones to tablets and laptops, including Android, Apple iOS and Windows systems.

We will briefly present each team and their app, award the prizes and review current plans for mobile device programming (including app development) at NMU and Intel, including plans for future Intel-sponsored app competitions and internships. These are exciting times in Computer Science at NMU and this will be an opportunity to find out about some of the latest developments.

Refreshments will be provided including beverages, hors d’oeuvres, pizza and cake.
