

Economics

How a poor indigenous family lives in the under-developed Andes and how international trade impacts countries may seem like two wholly unrelated subjects, but they are not. Both are economic concerns, and can be studied, along with many other economic issues, by majoring in Economics.

Majoring in Economics yields a well-rounded degree that will enable you to pursue work in business, government, law, writing, and even foreign affairs. Your career possibilities depend upon your application of the competencies and skills you acquire through your academic course work and extracurricular activities.

Upon completion of an Economics degree, NMU students have gone on to continue their education or have entered the workforce. Past graduates had entered advanced degree programs in economics (MA and Ph.D.), business (MBA) and law (J.D.), while others have entered the workforce using the skills they learned at NMU. Some recent graduates have joined insurance businesses, while others have entered investments and commodities trading in cities such as Boston and Chicago. Still other graduates have become bankers or are self-employed. Graduates with experience have entered politics and two have even returned to serve on Northern's Board of Control.

Skills and Competencies

An Economics degree will sharpen and develop many skills and competencies, such as writing, speaking, critical thinking, reading, and researching. Strong communication skills, both oral and written, are necessary in today's career fields as employers are seeking applicants who not only know certain information, but who also have the required skills to convey that information to others. Critical thinking, data-analysis, problem solving, adapting ideas and recognizing relevant connections are quite important in the field of economics and are highly valued by employers today.

Course Work

This degree includes the following courses as part of the program requirements, and specific major requirements along with general education courses and graduation requirements.

Core

- EC201 Microeconomics (4 cr.)**
- EC202 Macroeconomics (4 cr.)**
- EC401 Intermediate Microeconomics (4 cr.)**
- EC402 Intermediate Macroeconomics (4 cr.)**

Economic Electives (16 cr.)

- May be counted as electives towards major:*
- MA161 Calculus (4 cr.) and/or**
 - MA 171 Intro to Probability and Statistics (4 cr.)**

Minor (20 cr.)

Detailed course descriptions can be found at www.nmu.edu/bulletin.

Career Development

You should begin the resume-building process as soon as you can. The Academic and Career Advise-ment Center can assist you with career planning, while Career Services will help you fine tune your resume and look for jobs related to your field. In the meantime, the more hands-on experience you have, the better the chances are that you will find a job. Becoming involved with a student organization such as the Economics Student Association is an excellent way to develop your professional skills and gain experience. Involvement with community groups such as the Economic Club of Marquette County or NMU's Center for Economic Education and Entrepreneurship are excellent ways to build your "network." Your academic course work is important as well, so be sure to maintain a high grade point average.

Additional Considerations

Most positions as "professional economists" require an advanced degree (MA and/or Ph.D.) in economics. Students interested in pursuing advanced degrees in economics should take a minimum of a year of calculus, a semester of statistics and a semester of matrix algebra. Students wishing to end their studies at the bachelor's level often find employment in the financial services industry (banks, brokerage houses, etc) or government. A minor in marketing, accounting or finance can prove useful in the financial services industry. A minor in political science can complement a major in economics for employment in the public sector.

Job Outlook

The Bureau of Labor Statistics reports that the median average wage for economists was \$101,050 in May 2016. Employment of economists is projected to grow at a 6 percent rate from 2014 to 2024. Job prospects should be best for those with a master's degree or Ph.D., strong analytical skills and related work experience.*
