

Michael Lemke presents

The Mathematics of Employment

Since graduating from NMU with a degree in Mathematics and Philosophy, Michael Lemke has worked for various types of companies ranging from a tiny two-man startup called SURV to massive organizations like McGraw-Hill, Pearson, Apple and Zynga. All along the way, Michael has found interesting ways to apply mathematics to projects he has worked on.

This presentation will explore three categories of mathematical knowledge that Michael employs on a day-to-day basis with the hopes of demonstrating that mathematics is not just required in the workplace, but is the most important tool at your disposal when trying to solve many of the problems presented in business context.
